

This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

- + *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.
- + Refrain from automated querying Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.
- + *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.
- + *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. You can search through the full text of this book on the web at http://books.google.com/

BULLETIN

OF THE

UNITED STATES NATIONAL MUSEUM.

No. 19.

PUBLISHED UNDER THE DIRECTION OF THE SMITHSONIAN INSTITUTION.

WASHINGTON: GOVERNMENT PRINTING OFFICE. 1882.

ADVERTISEMENT.

This work is the twenty-second of a series of papers intended to illustrate the collections of natural history and ethnology belonging to the United States, and constituting the National Museum, of which the Smithsonian Institution was placed in charge by the act of Congress of August 10, 1846.

It has been prepared at the request of the Institution, and printed by authority of the honorable Secretary of the Interior.

SPENCER F. BAIRD,

Secretary of the Smithsonian Institution.

SMITHSONIAN INSTITUTION,

Washington, April 26, 1882.

NOMENCLATOR ZOOLOGICUS.

AN ALPHABETICAL LIST

OF

ALL GENERIC NAMES THAT HAVE BEEN EMPLOYED BY NATURALISTS FOR RECENT AND FOSSIL ANIMALS FROM THE EARLIEST TIMES TO THE CLOSE OF THE YEAR 1879.

...Indos-learning turns no student pale Yet holds the sel of solenos by the tail. POPE. Dunciad, 1, 279.

IN TWO PARTS:

I. SUPPLEMENTAL LIST. II. UNIVERSAL INDEX.

BY

SAMUEL H. SCUDDER.

WASHINGTON: GOVERNMENT PRINTING OFFICE. 1882.

III-IV

PREFACE.

This work originated in personal needs. The labor involved in consalting so many books of reference to see how and where a certain generic name had been used, or whether one coined for a special occasion had already been employed, led me to cut up a copy of Marschall's Nomenclator* and making a single alphabet of its twenty-one lists, add to them from year to year the names found in the index to the Zoological Record. The scrap-book thus formed made a tolerable supplement to Agassiz's Index,† and was worth the pains employed. The alphabet of the scrap-book could not, however, be kept intact, especially in view of the multiplicity of compounds of some favorite initiatory word like axarea; it became more complicated and unwieldy with every addition; and in view of the length of time that had elapsed since Agassiz's index was issued, the need of a new index universalis became daily more apparent. My zoological friends, to whom my manuscript list was open, urged also the boon such an undertaking would confer upon all working naturalists, and the cordiality with which a proposi-

*Nomenclator zoologicus, continens nomina systematica generum animalium tam
viventium quam fossilium, secundum ordinem alphabeticum disposita sub auspiciis et
amptihus C. R. Secietatis zoologico-botanicae conscriptus a comite Augusto de Marhall 8°. Vindobonae, 1873. Pp. 4, 482. This work includes 19,966 entries.

The record of zoological literature, vol. 1-6. [Continued under the title] The

The record of zoological literature, vol. 1-6. [Continued under the title] The zoological record for 1870 [-1879]; being vol. 7 [-16] of the Record of zoological literature. 16 vols., London, 1865-1881. 8°. Vols. 1-5 were never indexed; the index for vol. 6 will be found in vol. 10. Vols. 1-6 were edited by C. L. G. Günther; vols. 7-9 by Alfred Newton; vols. 10-13 by E. C. Rye. The indexes of volumes 6-14 contain 7.68 names.

Nonenclator zoologicus, continens nomina systematica generum animalium tam tiventium quam fossilium, secundum ordinem alphabeticum disposita, adjectis aucturibus, libris, in quibus reperiuntur, anno editionis, etymologia et familiis, ad quas periment, in singulis classibus. Auctore L. Agassiz. Adjuvantibus, Princ. C. L. Baparte, H. Burmeister, T. a Charpentier, C. Duméril, G. R. Ehrenberg, G. F. Eriches, E. P. Germar, G. R. Gray, J. E. Gray, L. Imhoff, J. J. Kaup, H. Loew, H. Lucas, C. T. Menke, H. a Meyer, F. Mieschner, M. Milne-Edwards, H. E. Strickland, A. Wagser, G. R. Waterhouse, Zeller. 4°. Soloduri, 1842–1846. Pp. (1539).

The work included the following, which is the volume referred to in the text:

Separatoris roologici index universalis, continens nomina systematica classium,
inerm, familiarum et generum animalium omnium, tam viventium quam fossilium,
dum ordinem alphabeticum unicum disposita, adjectis homonymils plantarum,
and variis adnotationibus et emendationibus. Auctore L. Agassiz. 4°. Soloduri,

Pp. 5, 200. This was also issued in 12° (from the same type rearranged), Solo1845. Pp. 10, 1135. This last, containing 32,964 entries, served as a basis for my
antioged below, copies being cut up and rearranged with other lists in one

VI PREFACE.

tion to this effect was received by Professor Baird, and the opportunity afforded me by Mr. Agassiz (to be mentioned below), determined me to undertake the task.

The usefulness of such a work need not be explained to the professional naturalist. To every one the nomenclator and index of Agassiz, so admirable in its execution, is a vade-mecum. The notorious inaccuracy and incompleteness of Marschall's supplement to it on the other hand, and the fact known to me both by personal study and by communications of others, that several important works had altogether escaped notice in any lists, determined me to make the new universal index more complete and satisfactory by prefixing to it, in a single alphabet, a supplemental list of names which had been omitted from or incorrectly given in any of the previously published lists, so that they could afterward be included in the general index.

Confident, moreover, of the support I should receive from naturalists, and appreciating the added value which authoritative statements from first sources would have, a short notice of my project was published in Nature,* and a circular was also prepared and widely distributed, inviting naturalists to send me lists of the genera founded by them in recent years, to be included, over their names, in the proposed supplemental list.

The responses to this appeal were so general, that I soon found the task tenfold greater than I had anticipated, and although the work was thereby rendered far more satisfactory, it involved so much more labor that it would never have been attempted, if foreseen. This, however, has not deterred me from prosecuting it with the same care that would have been given to a less arduous undertaking, although it has been at a great sacrifice of time and strength. Not a few persons sent me complete lists of their genera, including very many already reported, but which I was unwilling to omit, from the value which attached to them as furnished by the authors themselves. Early in my work I learned that a somewhat similar undertaking had been planned by some of the staff of the British Museum, and I would gladly have left it to them had not steps been taken which pledged both the Smithsonian Institution and myself to the task; and with great generosity the material which had been collected by Mr. Waterhouse was placed in my hands. How largely my list has profited by this courtesy, its own pages will show.

It is a special pleasure to acknowledge my indebtedness to Mr. Alexander Agassiz, who freely placed at my disposal the manuscript additions and corrections which Professor Agassiz had made to his Nomenclator. These furnished the most considerable additions to my list, and are particularly full in radiates, mollusks, and fishes.† They had been collected under the direction of Professor Agassiz, during a long period of

^{*} Vol. 20, p. 551, October 9, 1879.

[†]By an oversight, the principal additions to the lepidoptera, colcoptera and neuroptera were not received.

PREFACE. VII

years and by many persons, but having never been fully revised by him have an unequal value. It was impossible, from their multitude and the vast labor involved, to subject them to a critical examination, so that while I have given them as found, it is only justice to the source from which they came to make this explanation.

Through the intervention of Mr. E. C. Rye, of London, who himself sent me various memoranda of omissions from previous lists, I received a manuscript catalogue of genera proposed in diptera, including their variations in orthography, prepared and forwarded to me by Mr. G. H. Verrall, of Newmarket; the number of these, reaching several thousands,* would surprise even a specialist in that group. Free use has been made of this list so generously offered, and every name not previously recorded will be found entered in the body of the Supplemental List. The list did not contain complete references, but, in general, only indications of author and date; fuller details, however, were in some instances furnished by Mr. Verrall on application.

Of other lists supplied by specialists in their own departments, I must express my very great obligations to Mr. J. Bigot, of Paris, who kindly sent me detailed references to three hundred and eighty-five genera of diptera, referred to neither by Agassiz nor Marschall, bringing the list down to May, 1879. To Capt. W. H. Dall, of the United States Coast Survey, I am indebted for a vast number of memoranda of various kinds upon mollusca, including a complete list of his own genera, besides many corrections made upon the proofs of my work submitted to him; these are all made with his usual care and precision. The entries received from Mr. Waterhouse, of the British Museum, to which allusion has been made, have an especial value, since nearly all the references obtained by him from secondary sources have received his careful veri-Scation, and the list was made up of omissions from previous records; his list and Mr. Dall's have been, after those obtained from Mr. Agassiz and Mr. Verrall, perhaps the most extensive of all. I have received also the very welcome and generous assistance of Mr. W. H. Dalton, of H. M. Geological Survey, London, whose special work on the Geological Becord t enabled him to send me an extensive list of overlooked genera of fossil animals, which were the more desirable from their having been so generally neglected since Agassiz's time. Similar aid was received from Mr. W. F. Kirby, of the British Museum, who sent me a long array of names in lepidoptera, mostly of recent years, which his labors on the

^{*}In February, 1882, Mr. Verrall wrote me that this list, which when sent to me contained about 4,400 names, of which he had seen the original references to all except about 250, now contained 4,900 names; of these he considers fully one-third as only applied or misspellings, which had been collected for index purposes, erroneous farm being frequently misleading and troublesome.

The geological record for 1874 [-1877]. An account of works on geology, minerally, and palmontology published during the year. Edited by William Whitaker.

London, 4 vols., 1875-1880. The last two volumes add to the title: With supports for 1874-1875 [1874-1876].

VIII PREFACE.

Zoological Record especially fitted him to do; from his colleagues on the Zoological Record, Dr. C. F. Lütken, of Copenhagen, who kindly furnished memoranda of recently established genera of coelenterates and echinoderms; and Dr. E. von Martens, of Berlin, who sent a very extensive list of recently established genera of mollusca.

Only less extensive than these have been the lists and memoranda received from numerous other naturalists. Mr. P. H. Carpenter, of Eton College, sent an annotated synopsis of all the genera of recent and fossil comatulidae; Mr. Walter Faxon, of the Museum of Comparative Zoology, furnished numerous references to old and new genera of crustacea; his colleague, Mr. S. Garman, the same of fishes and reptiles; Dr. Gestro, of Genoa, a complete list of all genera published in the Annali del Museo Civico in 1878 and 1879; Prof. D. S. Jordan, of Bloomington, a long series of generic names of fishes, including all established by himself; Dr. G. Lindström, of Stockholm, many genera of fossil corals; Mr. Theodore Lyman, of the Museum of Comparative Zoology, a list of the genera of astrophytidae and ophiuridae published in 1878 and 1879; Mr. R. McLachlan, of London, notes of many overlooked genera of orthoptera and neuroptera; Mr. J. Monell, of Saint Louis, a synonymic list of all genera of aphidae; Dr. W. Peters, of Berlin, lists of the recent genera proposed by the staff of the Berlin Museum; my lamented friend Count L. de Pourtalès, of Cambridge, the recent genera of echinoderms; the late Mr. J. Duncan Putnam, of Davenport, a list of the genera in the Proceedings of the Davenport Academy; Mr. C. V. Riley, of Washington, notes on some of his genera; Mr. E. C. Rye, of London, sundry overlooked genera and corrections in previous lists; Sir S. S. Saunders, of London, similar memoranda in coleoptera; Dr. H. de Sanssure, of Geneva, brief notes on some of his own genera; Prof. S. I. Smith, of Yale College, various memoranda and corrections in Marschall's Nomenclator, as well as a list of his own genera; and Mr. F. M. Van der Wulp, of the Hague, a list of the genera established in recent years by the Dutch entomologists, mostly from the Tijdschrift voor entomologie.

As already stated, many naturalists furnished me with complete lists of all the genera established by them; prominent among these, from the great extent of their lists, besides some already incidentally mentioned, are Prof. E. D. Cope, of Philadelphia; Prof. James Hall, of Albany; Dr. G. H. Horn, of Philadelphia; Prof. A. Hyatt, of Boston; Dr. J. L. Le Conte and Dr. Joseph Leidy, of Philadelphia; Prof. O. C. Marsh, of New Haven (who had the goodness to put his copy in print for me); the late Dr. A. Menge, of Danzig; Dr. A. S. Packard, of Providence; Dr. O. M. Reuter, of Helsingfors; Dr. T. Thorell, of Genoa, and Prof. A. E. Verrill, of New Haven, to all of whom my best thanks are due. Shorter similar lists are also gratefully acknowledged from Mr. W. G. Binney, of Burlington; Mr. Charles Brongniart, of Paris; Mr. George B. Buckton, of Haslemere; Mr. W. S. Dallas, of London; Mr. D. C. Danielssen, of Bergen; Dr. J. W. Dawson, of Montreal; Dr. Francis

PREFACE. IX

Day, of Cheltenham; Mr. A. de Bormans (Dubrony), of Brussels; Mr. Henry Edwards, of New York; Dr. Aug. Forel, of Munich; Prof. Albert Gaudry, of Paris; Dr. H. B. Geinitz, of Dresden; Mr. O. Harger, of New Haven; Mr. J. S. Kingsley, of Worcester; Dr. L. Koch, of Nuremberg; Mr. P. de Loriol, of Frontenex; Dr. A. W. Malm, of Gothenburg; Mr. Edward J. Miers, of the British Museum; Dr. A. B. Meyer, of Dresden; Mr. P. O. Olsson, of Östersund; Mr. W. H. Patton, of Washington; Prof. Felipe Poey, of Havana; Dr. C. Ritsema, of Leyden; Dr. O. Staudinger, of Dresden, and Rev. T. R. R. Stebbing, of Tunbridge Wells.

Valuable notes were also communicated by Mr. J. A. Allen, of the Museum of Comparative Zoology, upon the genera of birds, and on the same by Dr. Elliott Coues, of Washington; Dr. Ph. Bertkau, of Bonn, kindly sent a list of recent genera of arachnida; Rev. A. E. Eaton, of Bromley, notes of many genera of ephemeridae; Prof. C. H. Fernald, of Orono, memoranda of Lord Walsingham's genera; and the late Dr. Snellen van Vollenhoven, of the Hague, notes of various genera.

Besides the complete lists of their genera sent by various naturalists many others responded to the circular asking for names introduced since 1877, and full lists of these, some of them very extensive and all very welcome, are gratefully acknowledged from Dr. Joachim Barrande, of Prague; Dr. Evald Bergroth, of Helsingfors; Sen. J. N. Barboza du Bocage, of Lisbon; Dr. Ignacio Bolivar, of Madrid; Mr. George S. Brady, of Sunderland; Rev. O. P. Cambridge, of Blandford; the late Dr. Candèze, of Liege; Mr. H. J. Carter, of Budleigh; Mr. V. T. Chambers, of Covington; Dr. Herman Friele, of Bergen; Mr. F. D. Godman, of London (including those established in conjunction with Mr. Salvin); Mr. G. Brown Goode, of Washington; Mr. H. S. Gorham, of Shipley; Mr. G. Bird Grinnell, of New Haven; Mr. A. R. Grote, of New Brighton; Dr. Richard Hertwig, of Jena; Dr. A. A. W. Hubrecht, of Leyden; Count E. Keyserling, of Glogau; Dr. R. Leuckart, of Leipsic; Mr. G. M. R. Levinssen, of Copenhagen; Mr. Jules Lichtenstein, of Montpellier; Mr. Frederick Moore, of London; Dr. H. Alleyne Nicholson, of St. Andrews; Baron R. von Osten Sacken, of Heidelberg; Dr. G. O. Sars, of Christiania; Baron E. de Sélys Longchamps, of Liege; Dr. David Sharp, of Thornhill; Dr. Signoret, of Paris; Mr. E. Simon, of Paris; Mr. W. J. Sollas, of Bristol; Dr. E. L. Trouessart, of Villévêque; Dr. F. Vejdovsky, of Prague, and Lord Walsingham, of London. Several others sent their recent publications.

These contributions have added vastly to the value of the supplemental list,* and having also delayed its appearance I have attempted

[&]quot;It may be remarked here that believing such contributions to be of some intrinsic value, at least as a corrective of errors in the printed list, the originals have, wherever possible, been preserved, collected into a volume, and deposited in the Museum of Comparative Zoology at Cambridge, where they can be examined together with the samutated Nomenclator of Agassiz.

X PREFACE.

to perfect it by every means in my power, and to examine all possible aids. Accordingly the indexes to the Geological Record, the Zoological Record, and the Zoologischer Jahresbericht† of the latest dates before 1880 have been entered with the others, and an extensive series of memoranda of genera of lepidoptera, orthoptera, and fossil insects in my possession have been carefully examined. A number of books affording memoranda of this nature have also been carefully examined. A list of such works as have been systematically studied for this purpose is here appended.

It remains only to indicate briefly the plan and scope of the work.

The first part, or "Supplemental List," includes 15,939 entries of genera established previous to 1880, not recorded or erroneously given in the nomenclators of Agassiz and Marschall, or the Zoological Record indexes. It includes, however, besides these: 1st, the genera of the Zoological Record for 1878 and 1879 (2,133 names, which had not been entered in the MS, of the second part, or Universal Index, at the time of its preparation); 2d, the genera in the index of the Zoologischer JahresXVIII PREFACE.

bericht for 1879, not otherwise given; 3d, all genera, whether previously recorded correctly or not, which were furnished by the authors themselves; and 4th, a few groups higher than genera, most of which were furnished by correspondents, and therefore not expunged; no attempt has been made to collect these, and they are distinguished from the genera by being hair-spaced. Where the entry has been furnished by an author or other correspondent his name is appended in italics as its sponsor; the name Agassiz is appended to all entries copied from his manuscript additions to the Nomenclator of 1846; for all entries containing no final italicized name the compiler is responsible, but as many of these have, of course, been taken at second hand, it will be best in all doubtful or critical cases to verify them. That the list is far from being fully complementary the compiler has had ample proofs since the completion of the appendix. When, indeed, such common generic names as Homo and Musca have escaped entry until now, he cannot anticipate that he has been much more successful than his predecessors.

The second part, or "Universal Index," containing, with its crossreferences, about 80,000 entries, includes all names appearing either in the first part of the present work, or in the nomenclators of Agassiz and Marschall, or in the indexes of the Zoological Record through that for the year 1877. A single letter refers to the place where a fuller account will be found, the Z having an abbreviated form of the year appended to indicate the volume of the Zoological Record. The list gives the names in clear type but in the most compact form, in order that as many names as possible shall be before the eye at once,—a prime requisite in an index. There is given: 1st, the name of the genus (including also, in italics, such family or higher names as appear in Agassiz's Nomenclator or my Supplemental List); 2d, the authority; 3d, the group; 4th, the date; and 5th, the reference to the nomenclators. No critical marks are appended. as was at first intended, as judgment in such matters varies too much to render it desirable, considering the labor involved; the material for judgment is all that should be expected of the compiler. For convenience, an edition of each part will be issued separately.

Finally, the compiler expresses the hope that the work may be found tolerably accurate. To the excellent proof-readers of the Government Printing Office much of the credit is due for what freedom it has from typographical faults and inconsistencies, but every word of the proof has been read by the compiler himself many times with utmost care. If it shall be found as useful to the student as he hopes, the dreary work of its preparation will be looked upon with satisfaction.

SAMUEL H. SCUDDER.

HARVARD COLLEGE LIBRARY, Cambridge, Mass., March 31, 1882. PREFACE. XIX

The compiler is authorized by the Secretary of the Smithsonian Institution to state that the Institution proposes hereafter to issue decennial supplements to this list (beginning with the years 1880–1889, inclusive); and naturalists in all parts of the world are invited to send smaally to the Institution lists of the genera and subgenera which they have proposed during the preceding year. It is desirable that these should be prepared on the following uniform plan, which covers all necessary data: 1, the generic name; 2, the author; 3, the citation, in full with page; 4, the date; 5, the typical species; 6, the derivation; 7, 8, and 9, the class, order, and family. The following specimen may serve as an example:

Hesperornis Marsh, Amer. journ. sc., (3), iii, 56, 360. 1872. Type Hesp. regalis Marsh. δοπερος, δρνις. Aves, Odontornithes, Odontolcae. Definite information concerning any names omitted from the Universal Index here published, or inaccurately recorded in the references given (unless subsequently corrected), are also asked and will find a place in the contemplated supplement.
